

Alexander Wuensche, CDT obtained his accreditation as a CDT in Friedrichshafen, Germany. Now president of Zahntechnik Dental Lab in Miami, FL, he specializes in complex implant cases and CAD/CAM technology. Alexander Wuensche has lectured for numerous leading Dental Education Programs and published articles for numerous outstanding dental publications.

Title: The Search: A Prosthetic Potpourri to Find The “Right” Material

Description:

It is a commonly made assumption that there is just one aesthetic material available to solve challenging cases. In this lecture, Alexander Wuensche will share his experiences with the variety of different materials he uses in his laboratory to solve aesthetic and functional challenges—from the provisionalization to executing the final restoration.

He will take you on a journey to explain how materials can work together to make workflows more predictable for implant or tooth borne restorations. His planning involves digital smile design, implant planning, guide design with provisional and the final reconstruction.

Objectives:

- Understanding the importance of treatment planning early on
- Tying the knots between each step
- Understanding facial anatomy to establish a smile
- Differentiating available zirconia materials
